

* Docker Hub *

A container image registry.

We can push and pull docker images from Docker Hub. Using FROM keyword.

Naming Convention:-

username / <image name> : <version>

points to your
repository

image name

version if given
if not, becomes latest

Q How to push to a docker repo?

1. First login to docker Hub.
2. Use those credentials to login using terminal.

> docker login

3. Assign a proper name to a docker image.

> docker tag Image-name Image-name-convention

4. Push the image to docker.

> docker push Image-name-convention
